DESCRIPTION
Amorphous (non-crystalline) in structure and composed primarily of aluminum silicate, pumice is a naturally calcined volcanic glass foam consisting of highly vesicular strands permeated with tiny air bubbles. It is these frothy, friable glass vesicles that, when carefully refined to various grades, give pumice its unique and infinitely useful qualities.

GRADE APPLICATIONS
Used for: anti-skid concrete surfaces, cosmetic exfoliating grit, metal finishing, leather/suede finishing, non-skid surface paint/coatings, pothole filler, sand blasting, tumbling media.
