LOOSE BULK DENSITY GRADE 5

46 lb/per cubic foot [736.8 kg/per cubic meter] (ASTM C29)

DESCRIPTION

Amorphous (non-crystalline) in structure and composed primarily of aluminum silicate, pumice is a naturally calcined volcanic glass foam consisting of highly vesicular strands permeated with tiny air bubbles. It is these frothy, friable glass vesicles that, when carefully refined to various grades, give pumice its unique and infinitely useful qualities.

GRADE APPLICATIONS

Used for: filtration applications, non-skid surface paints/coatings.
