**DESCRIPTION**

Amorphous (non-crystalline) in structure and composed primarily of aluminum silicate, pumice is a naturally calcined volcanic glass foam consisting of highly vesicular strands permeated with tiny air bubbles. It is these frothy, friable glass vesicles that, when carefully refined to various grades, give pumice its unique and infinitely useful qualities.

**GRADE APPLICATIONS**

Used for: pozzolan in specialty concrete products—Glass Fiber Reinforced Concrete (GFRC) panels, precast products, cultured stone products.

**PACKAGING OPTIONS**
